

# Environmental Policy

The company's values underpin sustainability at Saica: we care about the future, we contribute value and we accept the challenges. These values guide us in our decision-making and integrate sustainability into our culture.

We do business as sustainably and innovatively as possible, right from the product and service design phase through to the end of the useful life of these products and services, promoting change to a sustainable model based on the Circular Economy.

**Our commitments are leading the way towards responsible management. These are:**

1

**COMPLY**

**To respect the current environmental legislation** in the countries in which we operate and, insofar as possible, **to anticipate the application** of new standards.

2

**PROMOTE**

To promote **the transition of waste to resources**, facilitating recycling and energy recovery, following the principles of the **Circular Economy**.

3

**MINIMIZE**

**To reduce to a minimum our impact** on the environment. Projects aimed at **Zero Waste** sent to landfill and the **decarbonisation** of our factories will enable us to significantly reduce the **environmental footprint** of our products and services.

We are aware that the availability of natural resources – water, for example – is essential for us to do business. **We have to respect the planet and protect it**, reducing our impact as much as possible and promoting rational and efficient use of the planet's resources.

4

**MANAGE**

**To identify and assess the risks** of our activities and facilities from an environmental point of view, continually updating the systems designed to **mitigate or eliminate** these risks, anticipating their occurrence.

5

**COMMUNICATE**

To always **adopt an attitude of cooperation and open communication** with our stakeholders, providing **transparent** information about our activities and successes in terms of environmental management and promoting a **climate of involvement** with our employees.

Working on the continuous updating and improvement of our management system gives us the best tools to achieve our objectives and to contribute towards present and future generations enjoying everything our planet has to offer.
